

SANITAS

HACKATHON PITCH

MEDICINE SUPPLY RISK

Find the shortage before the patient feels it.

A hospital dashboard that maps medicine supply risk,
evidence, and the next action.

CISPLATIN DEMO

BUILT FOR HOSPITAL PHARMACY TEAMS

Sanitas

The pain

Problem

Hospitals see shortages too late.

The ordering screen fails after the risk has already moved through suppliers, ingredients, and manufacturing events.

Patient story **1 drug**

Cisplatin Injection, needed for cancer treatment.

Signal **FDA**

Current shortage evidence anchors the graph.

Goal **Early**

Spot the supply path before treatment is delayed.

The patient is narration The graph models supply risk

Sanitas

Product view

Dashboard

A digital twin of medicine supply chains.

01Medicines

Start from the hospital portfolio.

02Suppliers

Map manufacturers and source evidence.

03Events

Connect shortages, quality constraints, and delays.

04Action

Open the path that needs attention.

Sanitas

Agent

Click investigate

The agent turns the graph into a hospital handoff.

01Inspect FDA evidence

Start from the mapped shortage node.

02Check supplier constraint

Read the Accord / Intas path.

03Add one source

Attach the 2026 API context calmly.

04Prepare report

Evidence, risk path, and next checks.

Visible tool callsNo treatment advice

Sanitas

Output

Report ready

Short enough to use in a real supply meeting.

What changed, why it matters, which sources back it, and what the team should check next.

Action needed

Prepare alternate supplier order. Verify approved supplier availability before stock drops below the safety threshold.

Human decision stays with the hospitalSanitas prepares the context

Sanitas

Why now

Build path

Six months gets this into pilot shape.

Connect live data, expand the graph, and test the workflow with hospital supply teams.
